# Pre-installation Notes

## IMPORTANT

### Pre-installation Notes

MADE IN THE UK

#### CDM / Health and Safety Requirements

For installation and handling the minimum PPE required is safety boots, overalls, gloves and safety glasses. Dependant on the site and method of lifting employed, hard hats may be required. All lifting equipment must be suitable for riggers. Operators must be suitably qualified.

#### Road Surface Information

Prior to installation the road surface and substrate must be inspected for condition and strength to ensure that it is suitable for the additional load that will result from the installation of the products.

If the sub base is concrete then at least 40mm thickness of wearing course is necessary to prevent point load displacement, which can occur if the wearing course is less than.

The road surface must be in good bound condition and must meet the correct BS/DIN standard of DIN 18316, DIN 18317, BS594-1 BS594-2:2003.

Product, fixings, adhesives and final installation cannot be guaranteed if the road surface does not meet these standards.

#### Product Storage

It is very important that our products are always stored flat to ensure solid attachment to the road surface. All products are strapped to and delivered on wooden pallets, together with the fixing kit boxed on top. Keep the pallets from touching other pallets, thereby eliminating the risk of bending the products; thus rendering them curled and deformed.

#### IMPORTANT INFORMATION - PLEASE READ

**It is the purchaser's responsibility to examine our products and establish the suitability of their intended purpose/application. We disclaim all responsibility for damage to the product due to incorrect use, handling, storage or installation. This does not apply in the unlikely event of failures due to manufacturing defects.**

**Receipt of a purchase order confirms that this guide has been read and that the road surface conditions are as per the manufacturer's minimum recommendations.**
